```

This sequence encodes a novel gene, bol-w, from the mouse bol-2 gene family. This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration,

Claim 3; Page 50-51; 86pp; English.

diseases.

Nucleic acid encoding inhibit cell survival,

apoptosis related gene e.g. for treatment of

cancer and bcl-w -

used to induce or and degenerative

Up-regulation of the gene can also be used to modify cell lines cultured in vivo, to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis, antibody production or screening of potential

The present sequence is described as a derivative of the mouse bol-w gene (see AAX25133) and encodes Bol-w protein (see AAX05533), a pro-survival member of the Bol-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of considering models and genetic sequences useful for inducing or reducing fertility. Of male animals. Methods are provided for the treatment of infertility, cor for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bol-w companies of the used to screen for the substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis or the content of the conte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WO9913710-A1

                                                                                                                                                                                                                       The present sequence is the mouse bcl-w gene encoding Bcl-w protein (see AAY05531), a pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene or in a gene associated with bcl w. Such animals have disorganised seminterous tubules and are determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, can induce infertility for including spermatogenesis in animals, or which

The method comprises to preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic ceffect, particularly hepatotoxicity, of a test or unknown compound. The ceffect, particularly hepatotoxicity, of a test or unknown compound. The ceffect in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to ceffectify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for cdrug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.

The bcl-2 family have both apoptotic activity and the apoptosis blocking activity. bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders where prevention of cell

The specification also describes human bcl-y protein (Rbcl-y) Rbcl-y and CC Hbcl-y are homologues of the bcl-2 protein thought to be involved in CC programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y corrections may be used to treat conditions associated with a disruption of CC the cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, CC (aspecially multiple sclerosis), myocardial infarction, vitally induced CC (especially multiple sclerosis), myocardial infarction, vitally induced CC ell death, aging, spinal cord injuries and amyotrophic lateral sclerosis CC triggers which may or may not be apparent. They may also be used in this CC way to develop cell lines which remain viable in culture for an extended CC period. In contrast, if they act as cell death stimulators, Rbcl-y and CC bloomy be used to treat conditions associated with prolonged cell life span such as cancer (especially kaposi's sercoma and lung cancer) CC and auto/hyperimmune diseases. They may also be used to cause cell death can and hence control, parasites

At least part of one strand (as1) of dsRNA1 is complementary to (I) and at least one end of dsRNA1 has an overhang of 1-4 nucleotides. The method is used to inhibit the expression of a wide range of genes. e.g. oncogenes, cytokine genes etc. in humans, also genes in Plasmodium or in viruses or viroids that are pathogenic for humans, animals or plants. Introducing an overhang into dsRNA greatly increases effectiveness for inhibiting gene expression, both in vivo and in vitro and also increases stability and thus the effective concentration inside the cell. The present sequence is that of a gene related to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              26-OCT-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                        The invention relates to inhibiting expression of a target gene in a cell by introducing at least two oligoribonuclectides (dsRNAI and II), both with a double-stranded (ds) structure of at most 49 sequential nucleotide pairs. At least part of one strand (S1, S2) of the ds structures in each of dsRNAI and II are complementary to regions in the target gene. The method uses antisense inhibition of gene expression using double stranded RNA inhibition (RNAI). The method is particularly used to treat tumours or infections, especially by plasmodium or viruses/viroids (pathogenic on humans, animals or plants). The method provides more effective inhibition of expression than known methods using a single dsRNA, even at very low concentrations. When dsRNA has at least one unpaired nucleotide at the end, stability (and thus effective concentration in the cell) is improved and efficiency can be increased further by pretreating the cells with interferon. The present sequence is that of a target DNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Double stranded RNA; dsRNA; RNAi; RNA inhibition; cytostatic; viru protozoacide; gene expression; antisense; tumour; infection; Plasm virus; viroid; anti-GPP; human; HIV; human immunodeficiency virus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Inhibiting expression of target genes, useful e.g. for treating tumors, by introducing into cells two double-stranded RNAs that are complementary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Hepatitis C virus; human papilloma virus; gene; ds.

Inhibiting expression of target genes, e.g. oncogenes, in cells, b introduction of complementary double-stranded oligoribonucleotide, treating the cell with interferon. λq after

German

target genes, particularly oncogenes, cytokine genes, Id (not defined) protein genes; developmental or prion genes, or genes expressed in pathogenic organisms (particularly plasmodia) or in viruses or viroids (pathogenic in humans, animals or plants). Treating the cells with interferon greatly increases the extent to which daRNA can inhibit expression of the target genes, and the effect is even greater when dsRNA are modified to increase their stability. ABX09936-ABX10075 represent gene fragments used to illustrate the method of the invention This invention describes a novel method for inhibiting expression of a target gene by introducing into the cell that contains the target gene a least one oligoribonuclectide (dsRNAI) that has a double-stranded (ds) structure of not more than 49 consecutive nuclectides (nt), where at least a segment of one strand of the ds structure is complementary with the target gene and the cells are treated with interferon before introduction of dsNNAI. The method is used to inhibit expression of E T

The method provides oligoribonucleotides for antisense inhibition of gene expression useful e.g. for treating tumours but the oligoribonucleotides may also be directed against genes present in pathogens (e.g. Plasmodium or viruses/viroids, pathogenic on humans, animals or plants) or against cytokine, id, developmental or prion genes. The method provides more effective inhibition of gene expression than use of known oligonucleotides, probably because the unpaired overhang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; HIV;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                            The present sequence is the human bol-w gene encoding Bol-w protein (see AAY05530), a pro-survival member of the Bol-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bol-w gene or in a gene associated with bol -w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in animals, or which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        An animal model exhibiting reduced protein associated with Bcl-w.

Novel DNAzyme useful for treating tumors, and for enhancing the sensitivity of malignant or virus infected cells to therapy, con catalytic domain and binding domain contiguous to the catalytic comprises domain. a

Disclosure; Page 44-45; 67pp; English

The invention relates to a DNAzyme which specifically cleaves mRNA transcribed from a member of the bcl-2 gene family. The DNAzymes comprise a catalytic domain, binding domains contiguous with the 5' and 3' end of the catalytic domain, and therefore hybridise with, the two regions immediately flanking the purine residue of the cleavage site within the bcl-2 gene family mRNA, at which DNAzyme-catalysed cleavage is desired. A pharmaceutical composition comprising a DNAzyme of the invention is useful for treating tumours in a subject, and for enhancing the sensitivity of malignant or virus infected cells infected cells to therapy. The DNAzymes are useful in diagnostics, therapeutics, prophylaxis, research agents and in kits. The DNAzymes are also useful for increasing the susceptibility of tumour cells to anti-tumour therapies such as chemotherapy and radiation therapy. This polynucleotide sequence represents a human bcl-2 gene of the invention

                                                                                                                                                                                                                                                                         This sequence encodes a novel human gene, bcl-w, from the bcl-2 gene family, extracted from an adult brain library. This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis, antibody production

The present sequence is described as a derivative of the human bol-w gene (see AAX25132) and encodes Bol-w protein (see AAY05532), a pro-survival comember of the Bol-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a conclusion of treatment and to an animal model for the identification of completules and genetic sequences useful for inducing or reducing fertility, of male animals. Methods are provided for the treatment of infertility, cor of male animals. Methods are provided for the treatment of infertility, cor of or reducing fertility, by modulating spermatogenesis. An animal model coarries a mutation is at least one allele of the human or murine bol-w companies of the second to series and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis con animals, or which can induce infertility

Disclosure; Page 36;

52pp; English

An animal model exhibiting reduced levels of a Bcl-w protein and/or protein associated with Bcl-w.

1999-243890/20 DB; AAY05532.

XX
Nucleic acids encoding B-cell lymphoma-y protein - useful for producing recombinant protein for use in treating uncontrolled cell growth e.g.

XX
PI cancers.

XX
Claim 3; Column 15/16; 27pp; English.

XX
PS
CC family, components in the cell death pathway. The bcl-2 family have both apoptosic activity and the apoptosis blocking activity. bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to creombinant genetic constructs to increase its expression in vivo. Also, cativity category activity category activity category activity category activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to continuous to increase its expression in vivo. Also, cativity category activity category activity category activity category activity category. The recombinant protein may be used to cantisense constructs can be used in disorders where prevention of cell category activity category activity category activity category activity activity category. The recombinant protein may be used to category activity category activity category. The recombinant protein may be used to category activity category activity activity category. The recombinant protein may be used to category activity category activity activity category. The recombinant protein may be used to category activity activity activity activity activity activity.
